

This document contains the instruction to reformat Amicroe Solid State Drives for the installation on Mac OS.

## AMICROE SOLID STATE DRIVE

- ✓ Please run through these steps only when you intend to use your SSD on Mac.
- ✓ What you need:
  - A PC with Windows installed.
  - A SATA Cable and an available SATA port to the PC (normally directly through the motherboard).
  - Mac Compatibility software downloadable from the following address.  
<http://www.amicroe.com.au/drivers/MAC Compatibility.zip>
- 1. Extract "MAC Compatibility.zip" to get "MAC Compatibility.exe".
- 2. Double click "MAC Compatibility.exe" and you will see the window shown in the below picture. Please carefully read the Message section.  
 \* AHCI is a mode which can be set up in the BIOS.
- 3. The software will show your drive on the "Device" drop down menu if it successfully detects the drive. Click "Run". After it runs the process for a few seconds you will be asked to reboot the PC to complete the installation.
